Experience

Farm&Co

I wore lots oh hats!

2016-2019

I built a fullstack rails application for local & organic vegie box subscriptions. This project was hosted on Heroku and utilised Stripe billing API's to create recurring payments for users.

The Farm Folk

Co-founder and CTO

2019-2020

Just prior to COVID-19 lockdown, a friend and I started an online organic grocery store called The Farm Folk. The marketplace was built using a Shopify-like app (out of necessity for a 3rd party supplier). These constraints required creative JS solutions in order for the frontend to be how we wanted it to be.

Le Wagon

Lead teacher

2020-Current

Lead Teacher at Le Wagon Melbourne and other campuses worldwide. This is a 10 week intensive bootcamp where I am responsible for giving lectures on topics including Ruby, Rails, HTML, CSS, JS, Heroku deployment and other topics including background jobs, search, web-sockets, testing and hotwire.js features. I am also responsible for helping students implementing and deploying projects, leading teams and resolving team disputes.

Align Body

Co-founder and CTO

2021

Created an online pilates app that was deployed to and distributed on the Android and iOS app store. The app was a creative solution employing a simple react native app to host a rails web app through a native WebView component. Consistencies in design were maintained through JS communication between the two. The native app was deployed using expo EAS services, whilst the web app was deployed on Heroku and utilised Vimeo private video hosting, Stripe for subscriptions an Tailwindcss for styling.

Hubbbi

Co-founder and CTO

2021

Created an online course building app with a pilot group to guide development. Hubbbi was designed to help teachers & leaders publish course content whilst also building community. The app was built in Rails with a Postgresql db, hosted on Heroku, styled with Tailwindcss and heavily implemented JS functionalities like drag and drop page editor with rich text, image uploads and recursive page design (like a computer file system).

Education

Le Wagon

Fullstack coding bootcamp

2018

Shillington College

Graphic design bootcamp

2016

University

UNSW Medicine - 6 months
QUT Business/Finance - 6 months

2014/2017

Technical Skills

Ruby | Ruby on Rails | Figma

CSS | JS | HTML | React.js

React Native | Tailwindcss

Redux | Others Coming Very Soon

Hobby projects

Ruby docs

Teaching at Le Wagon taught me how difficult it is for beginners to use the current ruby documentation. So I scraped information and redesigned it with a better UI/UX. I continue to personally sponsor & contribute to this project.
